[redacted]

Color metry Circuits Part 1

Perceived Color: (self-explanatory)

Abstract Color: (conceptual) or known idea of a color

not much else to write here, so I'll throw in a fun fact: I'm deuteranope color-blind.

Dress Video:

People see diff things due to lighting, shading, and nearby colors. The real dress color was black and blue.

Vision: Anatomy & Physiology:

Involved a bunch of anatomy regarding eye (useless for class)

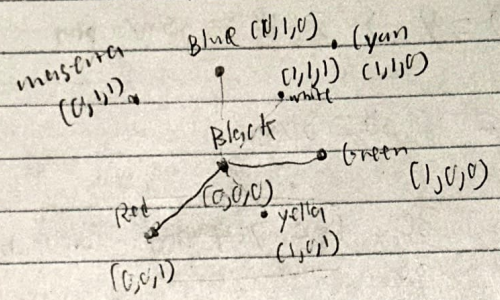
I likely lack green cones

How Spectrophotometer Works

The diffraction grating reflects only user specified wavelengths which is then shined through some sample, depending on how much light sets to the sensor behind the sample determines absorbance or transmittance.

Colorimetry P2

3D Color Space



Black body radiation!! Haven't heard about this since PHYS 34

Colorimetry P3

TCS34725 - used in lab to sense colors.

White LED helps w/ relativity for color sensing

Come back to this video for lab!

built in C++ class for this chip. easy coding

phototransister has peak sense at 570nm

refer to this for lab too

Miller capacitance?? ECEN 116 reference!! (analog IC Design)

"Cool Video"

- Candy Sorting Machine
- In short, it's a creative use for their color sensor
